

The Scope of 2B Technologies **At 2B Technologies...**

**We invent, design, manufacture and service
portable instruments to advance measurement technologies
for air monitoring, environmental and industrial applications**

From Management Leadership...

2B Tech's goal has always been to use sound science and innovative technology to provide our customers with better instruments than they could get anywhere else in the market.

We want to not only meet—but exceed—their requirements for measuring gases in air.

A commitment to quality infuses everything we do. Toward this end:

- We create and maintain a positive commitment to our customers and will solicit and use their feedback in our continual efforts to improve our products and services.
- We stay abreast of new scientific and technology developments, new legal or customer requirements, and new market opportunities in our continual efforts to innovate.
- We promote teamwork, employee involvement, and communication in all aspects of our everyday operations.
- We promote the active partnership of management and employees in all aspects of the conception, development, manufacture, and sales of our products and services.
- We involve all employees and management in implementing and continually improving procedures to ensure the high quality of our products and services.
- We seek long-term relations with our customers, suppliers, and our community.
- We adhere to proper business practices and will always include environmental concerns in our process.

We are proud to be a member of the community of businesses committed to meeting the quality standards of ISO 9001:2015.
