## Technical Note No. 029

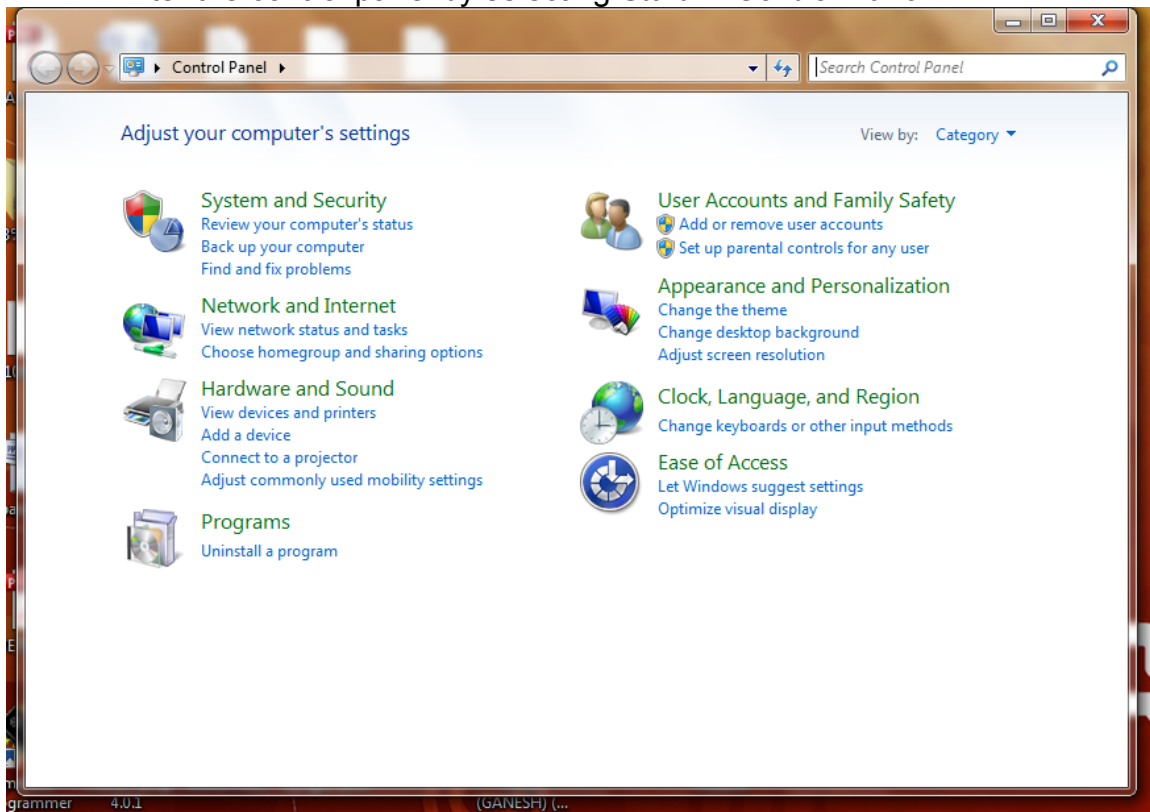

### Using 2B Data Display Software on Windows 7

**Date:** 13 December 2011

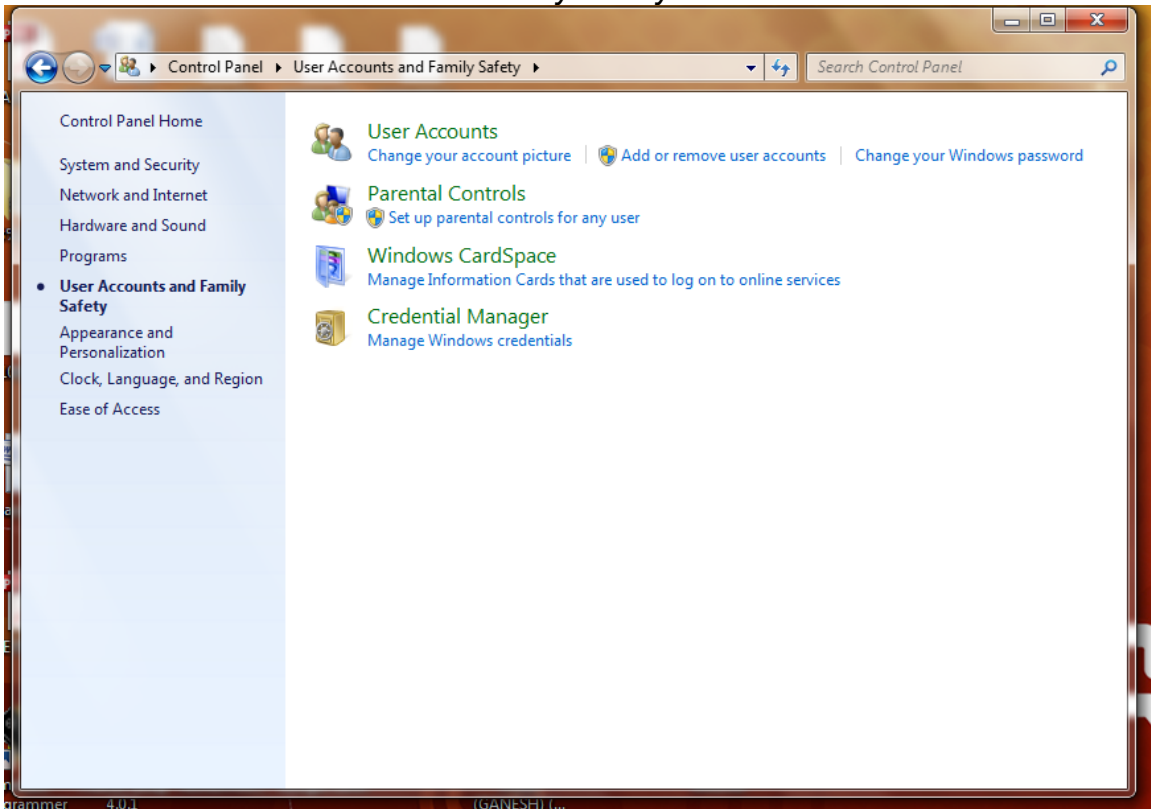

**Author:** Craig Williford

**Summary:** As of 12/13/11, using the 2B Data Display software on Windows 7 requires the “User Access Control” to be set to the lowest level. If not set to the lowest level, the program cannot access the configuration files correctly and the software will not work. The following is a procedure describing how to set the “User Access Control” to the lowest level.

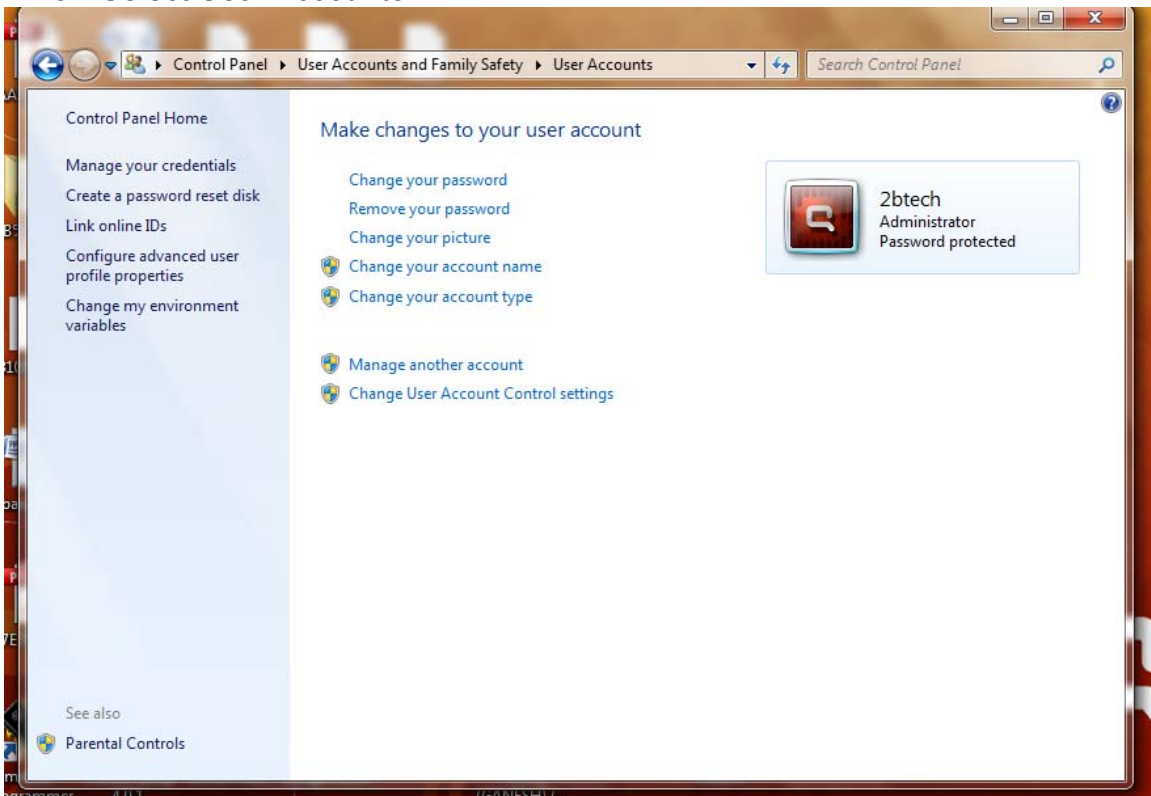

1. Enter the control panel by selecting *Start -> Control Panel*.

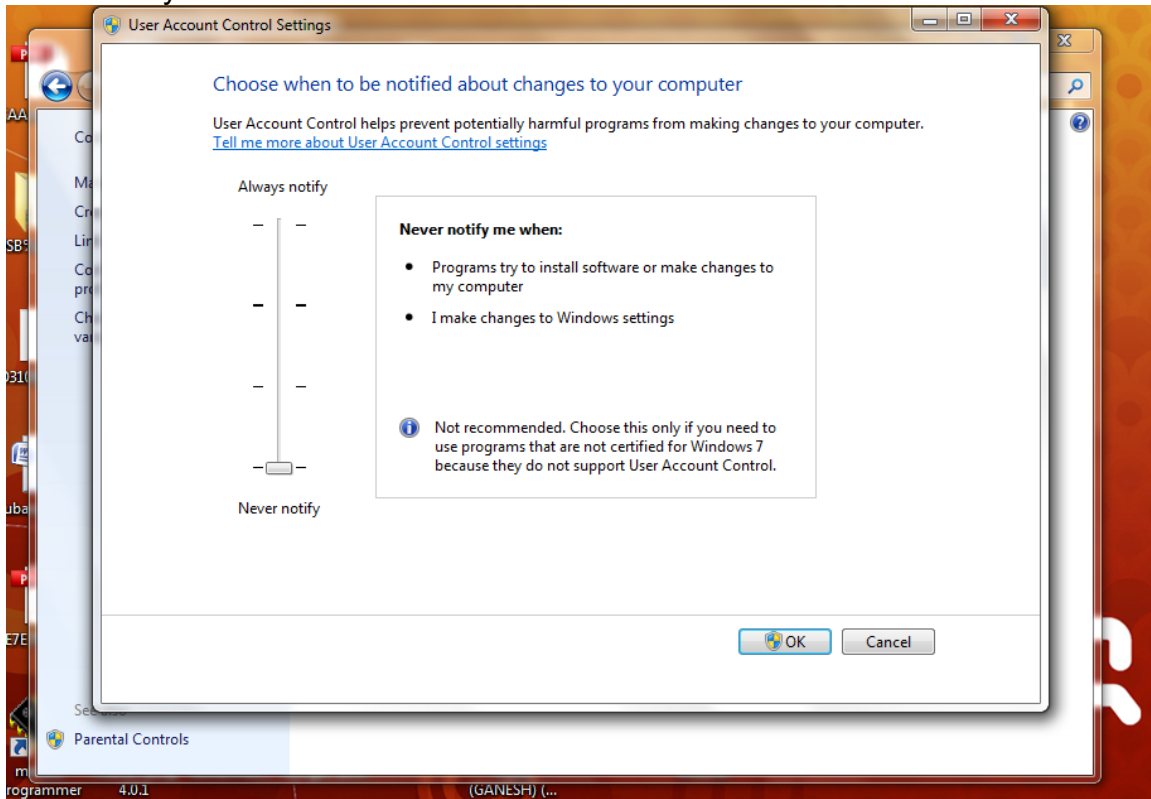

## 2. Select User Accounts and Family Safety.

## 3. Select User Accounts.

4. Select *Change User Account Control settings* and drop the level to “Never notify”.

5. You must then restart the computer in order for the new settings to work.
